

Who made my Cabinets?

A Helpful Guide to Identifying Your Existing Cabinetry

By DeAnna Martin

The easiest way to match or find replacement parts for existing cabinetry is to first identify the brand. Cabinet manufacturers use different methods for branding their cabinets. Below are some places you can check your cabinets for brand information.

Check the sides of the drawer boxes

Some manufacturers will brand the inside, or outside of the drawer boxes with their logo.

Check behind the drawer boxes for additional information

Candlelight Cabinetry places labels on the back side of their drawer boxes to help identify the cabinetry order information. Other companies may hand write the original acknowledgement number or purchase order that can help identify the specific construction, door style, wood species, and finish.

Check underneath your wall cabinets or side panel in your sink base cabinet

Other manufacturers will have a printed label on the bottom of the wall cabinets or on an inside panel in the sink base cabinet. In addition to telling you the brand, it will sometimes tell you the color, door style, and construction of the cabinet. Snap a picture or make a note of the details and the cabinet dealer should be able to decipher the construction details of your cabinet.

Check your sink base cabinet for a KCMA Label

Cabinet Brands that belong to the Kitchen Cabinet Manufacturers Association will have a sticker on the backside of the sink door or side wall of the cabinet. There should be a code or the cabinetry name in the middle of the sticker. For example, on the Bertch Kitchen + Door, the code is BCM. The KCMA website has a tool that you can use to [find a manufacturer](#).

Once you have identified the brand, you can check the cabinet manufacturer's website to find your local dealer. It is recommended to bring a cabinet door with you to the appointment to make sure the current finish and style will match your existing cabinets.
